

MAXIME DAHIREL

Behavioural and evolutionary ecologist
Urban ecology and evolution, dispersal ecology

My researches on the causes and consequences of **individual-level variation** are split along two linked axes:

- the ecology of **dispersal**, as a key trait bridging ecological and evolutionary dynamics
- the role of variation in explaining species' ability (or inability) to persist in increasingly anthropogenic environments (**especially cities**).

I develop these research themes using a combination of lab and outdoor experiments, monitoring in naturalistic contexts and individual-based models.
