

# MAXIME DAHIREL

**Behavioural and evolutionary ecologist**  
**Dispersal ecology and evolution, urban ecology**

My researches on the causes and consequences of **individual-level variation** are especially focused on **dispersal**, as a key trait bridging ecological and evolutionary dynamics, and on the role of behaviour in explaining species' ability (or inability) to persist in increasingly anthropogenic environments (**especially cities**).

I view these two axes of my researches as tightly linked, given the role of dispersal in responses to environmental changes in space and time. As (dispersal) behaviours are one part of complex integrated phenotypes, I am also always interested in the dynamics of morphological and physiological traits, among others.

I develop these research themes using a combination of lab and outdoor experiments, monitoring in naturalistic contexts and individual-based models.
